BIG DATA & ANALYTICS

www.qat.com

Transforming Data into Knowledge

Billions of people and computing devices are together creating an exponentially growing volume of data known as 'Big Data.' This isn't the transactional data stored in databases that businesses have been using to make decisions for decades. Big Data is the much less structured data coming from email, photographs, social media, blogs, and other emerging sources that can also be mined for information.

Our development team transforms data into knowledge, enabling high-value, content-centric products and services. We do this by adding analytics to produce knowledge, allowing consumer and enterprise end-users to focus on informed decision-making after organizing raw data into structured information.

Why choose us?

- ⊘ Categories
- ⊘ Speed
- ⊘ Quantity
- ⊘ Quality

Make an informed business decision by utilizing big data today.
